

# Pharmaceutical Treatment Cost Containment

## Reduce Pharmaceutical Costs by up to 70%!

HealthKeys works with companies that provide Pharmaceutical Treatment Cost Containment solutions designed specifically for plan members suffering from several chronic conditions such as rheumatoid arthritis, colitis, psoriasis, Crohn's disease, multiple sclerosis and more.

These all-inclusive (*travel, lodging, meals, physician consultants, pharmaceuticals, etc.*) solutions can reduce total treatment costs by up to 70% compared to standard PBM discounts, and when considering the high cost of specialty drugs today, the savings are substantial!

Treatment with Replacement Therapy for example, for Hemophilia can save an average of up to \$200,000 per patient. In other treatments, savings of as much as \$50,000 to \$75,000 or more per year can be realized.

Treatments are administered at the DaVinci Centre, Cayman Islands. The member will be introduced to the DaVinci Centre team before they book their trip and they will know their treating physician and have the opportunity to speak with them.

### This all-inclusive program:

- Requires travel to the Cayman Islands
- Provides Passport Acquisition Assistance
- Brand Name Drugs only unless otherwise stated
- Provides recommended Plan Document Language
- Has NO PEPM fees

## Sample List of High Spend Drugs Currently Available

Depending on pharmaceutical, the savings can range from several to hundreds of thousands of dollars!

The process is simple. First, your PBM file is evaluated to identify drugs which qualify for the program, then we work with you to engage the appropriate members for discussion about program benefits and savings.
